2. **Stopword Removal:** Eliminating common words that add little meaning.
3. **Lemmatization and Stemming:** Reducing words to their base or root form.
4. **Part-of-Speech Tagging:** Identifying grammatical parts of words.

Example: Tokenization using NLTK

```
import nltk
nltk.download('punkt')
text = "Natural language processing with Python is fun!"
tokens = nltk.word_tokenize(text)
print(tokens)
```

Named Entity Recognition (NER)

doc = nlp("Apple is looking at buying U.K. startup for $1 billion.")
for ent in doc.ents:
    print(ent.text, ent.label_)
```

Sentiment Analysis

This task involves determining the sentiment or emotion behind a piece of text.

1. Using TextBlob:

```
from textblob import TextBlob
text = "I love natural language processing!"
blob = TextBlob(text)
print(blob.sentiment)
```

2. Using VADER (from NLTK): Effective for social media texts.

```
from nltk.sentiment.vader import
SentimentIntensityAnalyzer
nltk.download('vader_lexicon')
sia = SentimentIntensityAnalyzer()
score = sia.polarity_scores("This is an awesome library!")
print(score)
```

Text Classification

Classifying texts into categories such as spam detection, topic categorization, etc.

1. Prepare labeled datasets.
2. Convert text to numerical features (using TF-IDF, Word2Vec, etc.).
3. Train classifiers like Naive Bayes, SVM, or deep learning models.

Example: Text Classification with Scikit-learn

```
from sklearn.feature_extraction.text import
TfidfVectorizer
from sklearn.naive_bayes import MultinomialNB
from sklearn.pipeline import make_pipeline

texts = ['I love this phone', 'This movie is terrible',
'Best restaurant ever', 'Horrible service']
labels = ['positive', 'negative', 'positive', 'negative']

model = make_pipeline(TfidfVectorizer(), MultinomialNB())
model.fit(texts, labels)

predicted = model.predict(['I really enjoy this app'])
print(predicted)
```

Topic Modeling

Discover hidden themes in a large corpus of text.

```
import gensim
from gensim import corpora
```

```
texts = [['natural', 'language', 'processing'],
['python', 'libraries', 'are', 'great'], ['topic',
'modeling', 'with', 'gensim']]
dictionary = corpora.Dictionary(texts)
corpus = [dictionary.doc2bow(text) for text in texts]
lda_model = gensim.models.LdaModel(corpus, num_topics=2,
id2word=dictionary)

for idx, topic in lda_model.print_topics(-1):
    print(f"Topic {idx}: {topic}")
```

A PDF (Portable Document Format) is one of the most popular and reliable digital document formats in the world. Developed by Adobe in the early 1990s, the PDF format was designed to solve a common problem in digital documentation: maintaining a document's original appearance regardless of the device, software, or operating system used to open it. A Natural Language Processing With Python PDF ensures that text alignment, fonts, images, colors, charts, and layouts remain exactly as intended by the creator.

Unlike editable document formats such as DOCX or TXT, PDFs are primarily intended for viewing, sharing, and printing. This makes them ideal for professional, academic, and official purposes. A Natural Language Processing With Python PDF is often used for ebooks, study materials, tutorials, research papers, manuals, contracts, brochures, reports, and official documents where content integrity is essential.

One of the strongest advantages of a Natural Language Processing With Python PDF is its universal compatibility. PDFs can be opened on Windows, macOS, Linux, Android, iOS, and even directly in modern web browsers without the need for special software. This universal support ensures that anyone receiving the file will see the exact same content, regardless of their platform or device.

In addition, PDFs support advanced features such as embedded fonts, vector graphics, interactive elements, hyperlinks, forms, digital signatures, bookmarks, and metadata. This makes the Natural Language Processing With Python PDF not just a static document, but a powerful and flexible medium for information distribution. Security features such as password protection, encryption, and permission control further enhance the reliability of PDFs for sensitive or proprietary content.

Why choose a Natural Language Processing With Python PDF format?
