It is considered a body-focused repetitive behavior (BFRB), often linked to underlying emotional or psychological factors.

Prevalence and Demographics

While trichotillomania can affect individuals of all ages, it most commonly begins in childhood or adolescence. Some key statistics include:

1. Estimated prevalence: 1-2% of the population
2. More common in females than males, especially during teenage years
3. Often co-occurs with other mental health conditions such as anxiety or obsessive-compulsive disorder (OCD)

Signs and Symptoms

Recognizing trichotillomania involves identifying typical behaviors and consequences, including:

1. Persistent hair pulling from the scalp, eyebrows, eyelashes, or other body areas

Digital notes can be added alongside highlighted text, enabling readers to record thoughts, questions, or summaries in context. These annotations remain linked to the original content, making it easier to revisit and understand notes later. Unlike handwritten notes, digital annotations are searchable and editable, enhancing long-term usability.

Many eBook platforms allow users to export notes and highlights. Exported annotations can be used for revision, research, presentations, or collaborative study. This feature is particularly useful for students and professionals who rely on organized summaries and references.
