What Are the Newton Laws of

Motion?

Overview of Newton's Three Laws

Isaac Newton formulated three fundamental laws of motion in the 17th century, which describe the relationship between the motion of an object and the forces acting upon it. These laws are:

1. **First Law (Law of Inertia):** An object remains at rest or moves at a constant velocity unless acted upon by an external force.
2. **Second Law:** The acceleration of an object is directly proportional to the net force acting upon it and inversely proportional to its mass, expressed mathematically as $F = ma$.
3. **Third Law:** For every action, there is an equal and opposite reaction.
