The Concept of Reincarnation and Children Who Remember Past Lives

What Is Reincarnation?

Reincarnation is the philosophical or religious concept that the soul or spirit, after biological death, begins a new life in a new body. This idea is prevalent in many spiritual traditions, including Hinduism, Buddhism, and certain New Age beliefs. According to these teachings, the soul's journey continues across multiple lifetimes, each providing opportunities for growth, learning, and resolution of past karma.

Children Who Have Lived Before: An Overview

Some children spontaneously recall details about their previous lives—names, places, relationships, or specific events—without prior

instruction or exposure. These memories often surface in early childhood and may persist for years or fade over time. Such children are frequently called "indigo children," "star children," or simply "children with past-life memories."

Trutz Hardo's research emphasizes that these children are often remarkably insightful, possess unusual talents, or display behaviors that seem unrelated to their current environment but make sense when viewed through the lens of past-life experiences.

Recognizing Children Who Have Lived Before

Common Signs and Behaviors

Parents and caregivers might notice certain signs indicating a child's possible past-life memories. Some of these include:

1. **Recollections of a Different Identity:** The child speaks about a different name, family, or location that does not match their current background.
2. **Unusual Knowledge:** The child demonstrates knowledge of places, events, or people that they could not have learned through normal means.
3. **Persistent Dreams or Imaginary Friends:** Dreams or imaginary companions that resemble figures from a past life.
4. **Specific Fears or Phobias:** Deep-seated fears of certain objects, places, or situations with no apparent cause.

Age of Manifestation

These memories often emerge between the ages of 2 and 7, a period

when children are most receptive to new experiences and less influenced by social conditioning. As children grow older, many of these memories tend to fade, which is why early identification is crucial.
