Understanding Linear Inequalities and Their Graphs

Before diving into how Kuta Software aids in mastering linear inequalities, it's essential to understand what these inequalities are and how they are represented graphically.

What Are Linear Inequalities?

Linear inequalities are mathematical statements involving linear expressions that use inequality symbols such as $<$, $>$, $\leq$, or $\geq$. They define regions on the coordinate plane rather than single points, representing

solutions to the inequality. Examples: - $y < 2x + 3$ - $3x - y \geq 4$ - $y \leq -x + 5$

Graphing Linear Inequalities

- The boundary line is graphed first, which is the corresponding linear equation (e.g., $y = 2x + 3$). - The boundary is dashed for strict inequalities ($<$, $>$) and solid for inclusive inequalities ($\leq$, $\geq$). - The solution region is shaded on one side of the boundary line, representing all points satisfying the inequality.

Introduction to Graphing Linear Inequalities Before diving into the specifics of using Kuta Software Infinite Algebra for graphing inequalities, it's essential to understand what linear inequalities are and how they differ from equations. **What Are Linear Inequalities?** Linear inequalities are mathematical statements that involve a linear expression on one side and an inequality sign ($<$, $>$, $\leq$, $\geq$) on the other. For example: $-y < 2x + 3$ - $4x - y \geq 5$ These inequalities represent a region in the coordinate plane rather than a single line or point. The boundary line is derived from the associated linear equation, and the inequality indicates which side of that line contains the solution region. **Visual Representation** Graphing linear inequalities involves: - Drawing the boundary line (dashed or solid depending on the inequality) - Shading the region that satisfies the inequality This visual approach helps students better understand the solution set of the inequality and its relation to the coordinate plane. The
