Understanding Nursing Diagnoses in Labor and Delivery

What Are Nursing Diagnoses?

Nursing diagnoses are clinical judgments about individual, family, or community responses to actual or potential health problems or life processes. They serve as a foundation for planning, implementing, and evaluating nursing care. In the context of labor and delivery, nursing diagnoses focus on maternal and fetal health concerns that may arise during the childbirth process.

The Role of NANDA in Standardizing Diagnoses

The NANDA International organization develops and maintains standardized nursing diagnostic terminology. These diagnoses facilitate clear communication among healthcare providers, ensure consistency in care, and foster evidence-based practice. For labor and delivery nurses, NANDA diagnoses help in early identification of complications, guiding timely interventions, and improving

maternal and neonatal outcomes.

Categories of Labor and Delivery Nursing Diagnoses

NANDA classifies nursing diagnoses related to labor and delivery into several categories based on the primary concerns during this period: 1. Physiological and Safety Concerns 2. Psychological and Emotional Well-being 3. Knowledge Deficits and Education Needs 4. Potential Risks and Complications Each category encompasses specific diagnoses tailored to common, critical, or anticipated issues during labor and delivery.

Common Nursing Diagnoses in Labor and Delivery According to NANDA

Below is an exploration of prevalent nursing diagnoses, their definitions, defining characteristics, related factors, and clinical relevance.

Physiological and Safety-Related Diagnoses

1. Risk for Fetal Distress (NANDA Code: 00099) - Definition: The vulnerability of the fetus to experience compromise in oxygenation, leading to abnormal fetal heart rate patterns or

other indicators of distress. - Related Factors: Uteroplacental insufficiency, cord prolapse, maternal hypotension, or hypoxia. - Clinical Significance: Early identification enables interventions such as changing maternal position, administering oxygen, or preparing for expedited delivery. 2. Ineffective Uterine Contraction (NANDA Code: 00002) - Definition: Uterine contractions that are insufficient in strength, duration, or frequency to facilitate labor progression. - Related Factors: Uterine overdistention, maternal fatigue, or medications. - Implications: May necessitate augmentation of labor with oxytocin or other interventions. 3. Risk for Infection (NANDA Code: 00004) - Definition: The susceptibility to being invaded by pathogenic organisms during labor and delivery. - Related Factors: Prolonged rupture of membranes, invasive procedures, or poor maternal hygiene. - Clinical Action: Strict aseptic technique, monitoring for signs of infection, and prophylactic antibiotics when indicated. 4. Risk for Hemorrhage (NANDA Code: 00026) - Definition: The potential for excessive bleeding during or after delivery. - Related Factors: Uterine atony, placental abnormalities, or coagulation disorders. - Management: Active management of third stage, readiness for emergency interventions.

Psychological and Emotional Diagnoses
