Questions & Answers About electrochemistry mcq

No	Question	Answer
1	What is the primary purpose of a salt bridge in an electrochemical cell?	To complete the circuit by allowing ions to flow between the two half-cells, maintaining electrical neutrality.
2	Which electrode is oxidized in a galvanic cell?	The anode is oxidized, as it loses electrons during the electrochemical reaction.
3	What is standard electrode potential measured against?	Against the standard hydrogen electrode, which is assigned a potential of 0 volts.
4	How is cell potential (E°_{cell}) calculated in electrochemistry?	By subtracting the standard reduction potential of the anode from that of the cathode: $E^\circ_{\text{cell}} = E^\circ_{\text{cathode}} - E^\circ_{\text{anode}}$.
5	What is the significance of a positive electrode potential?	It indicates that the species can be reduced easily and has a higher tendency to gain electrons.
6	Which factor does NOT affect the electrode potential?	The concentration of the electrolyte solution, provided the Nernst equation is applied, it does affect potential, so conditions like temperature are more influential.

7	In electrolysis, what is the role of the cathode?	To attract cations and facilitate their reduction to form a solid deposit or new compound.
8	What is the relationship between Gibbs free energy change (ΔG) and cell potential (E°_{cell})?	They are related by the equation $\Delta G = -nFE^\circ_{\text{cell}}$, where n is the number of moles of electrons and F is the Faraday constant.
9	Which of the following is used as an inert electrode in electrochemical cells?	Graphite or platinum, as they do not participate in the reaction but conduct electricity.
