What is IEC 61131-3?

IEC 61131-3 is the third part of the international standard IEC 61131, which defines the programming languages, data types, and programming environment for programmable logic controllers (PLCs). Published by the International Electrotechnical Commission (IEC), IEC 61131-3 specifically focuses on the programming languages used to develop control programs for automation systems. The standard aims to: - Provide a universal framework for PLC programming - Enable interoperability between different

automation devices and software - Simplify the development, maintenance, and integration of control systems Since its inception, IEC 61131-3 has become the de facto standard for PLC programming, supporting a wide range of industrial applications, from manufacturing lines to building automation.

Core Components of IEC 61131-3

IEC 61131-3 introduces several critical elements that form the basis of programming industrial automation systems:

Programming Languages

IEC 61131-3 specifies five programming languages, each suited for different types of control tasks: 1. Ladder Diagram (LD): Visual, relay-like language resembling electrical circuit diagrams; ideal for relay logic and simple control. 2. Function Block Diagram (FBD): Graphical language emphasizing data flow between function blocks; suitable for complex control processes. 3. Structured Text (ST): High-level textual language similar to Pascal or C; used for complex algorithms and data processing. 4. Instruction List (IL): Low-level, assembly-like language, now deprecated but historically used for simple, fast control routines. 5. Sequential Function Charts (SFC): Graphical language for modeling sequential control processes, including state transitions and steps.

Data Types and Variables

IEC 61131-3 standardizes data types such as BOOL, INT, DINT, REAL, and STRING, promoting consistency across programming environments. Variables can be global, local, or instance-specific, facilitating modular and reusable code.
