3. **Reinforcement Learning:** Systems learn by interacting with environments, receiving feedback in the form of rewards or

penalties, used in robotics and game playing.

Core Concepts and Techniques

1. Features and Labels: Features are input variables; labels are the target outputs.
2. Training and Testing: Data is split into training sets for model learning and testing sets for evaluation.
3. Overfitting and Underfitting: Balancing model complexity to generalize well to unseen data.
4. Evaluation Metrics: Accuracy, precision, recall, F1-score, and others measure model performance.
