Transtibial (Below-Knee) Amputation

- Incision placement: often a long posterior flap with anterior skin flap. - Bone trimming: shaping the tibia with a beveled or rounded end. - Soft tissue coverage: ensuring muscle and skin coverage of the residual limb. - Nerve management: handling cut nerves to prevent neuromas. - Wound closure: using techniques to promote healing and reduce infection risk.

Upper Limb Amputations

Procedures like transhumeral or transradial amputations focus on preserving as much limb length as possible, optimizing prosthetic control, and maintaining cosmesis.

Postoperative Care and Rehabilitation

The success of limb amputation surgery is heavily dependent on effective postoperative management.

Wound Care and Infection Prevention

- Regular dressing changes - Monitoring for signs of infection - Ensuring adequate vascularization

Prevention and Management of Complications

- Phantom limb pain - Neuromas - Contractures - Skin breakdown

Rehabilitation and Prosthetic Fitting

- Early mobilization and physical therapy - Desensitization techniques - Strengthening residual limb muscles - Custom prosthetic design fitting the residual limb
